

SANIBO MINI

Sanitary pumps

Sanibo mini is a sanitary pump for bathrooms and kitchens. The pumping station has one of the most advanced and failure-free constructions available on the market. In addition, it is a fully automatic device, intended for use in bathrooms to drain water from a washbasin, shower cabin or in kitchens from a washing machine / sink. The pump will start automatically when the liquid level reaches 55 mm and stop when it drops to 25 mm. It is perfect for bathrooms where the sink or shower tray is located outside the sewage riser or below the level of sewage outflow from the building. The pumping station can be connected to e.g. bathtub, washing machine, sink, shower tray, sink and even a bidet. The small size of the device and quiet operation allow for discreet operation of the pump and its placement, for example, in a cabinet under the washbasin.

Included with the pump are:

- Set of end caps: 40 mm
- Knee check valve 28 mm / 32 mm
- Set of stainless steel clamps

Application:

Rooms in the household without the technical possibility of connecting sanitary devices to the gravitational sanitary sewage system – cellars, attics and other rooms converted for sanitary purposes.
